Project Design Phase-II

Technology Stack (Architecture &Stack)

| Date | 28 October 2022 |
|---------------|--|
| Team ID | PNT2022TMID34843 |
| Project Name | Project – Personal Expense Tracker Application |
| Maximum Marks | 4 Marks |

Technical Architecture:

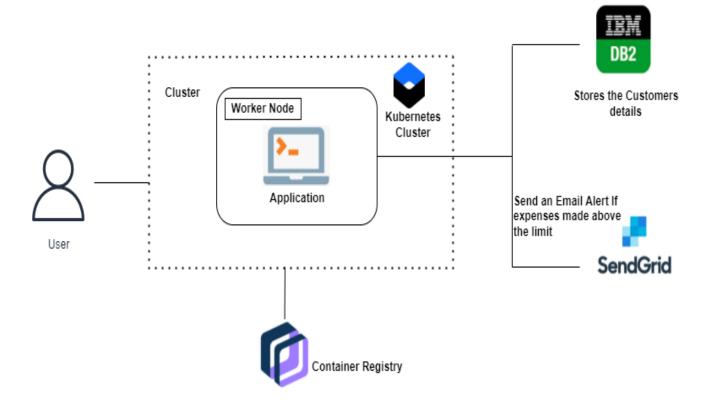

Table-1: Components & Technologies:

| S. No | Component | Description | Technology |
|-------|----------------|------------------------------------|--------------------------------|
| 1. | User Interface | Web UI, Mobile App, Chatbot | HTML, CSS, JavaScript / |
| | | etc. | Angular JS / React JS etc. |
| 2. | User Login | User can login either through | Google OAuth for Google |
| | _ | their gmail account or an | Signin. |
| | | account in the app server | Hashed password in DB |
| 3. | Graph | Rendering plots and graphs | Seaborn, Mathplotlib |
| | Visualisation | based on the user spending data | |
| 4. | Accounts | User can view and mange all | Python, Flask and Trusted |
| | | their financial accounts for real- | bank database for verification |
| | | time tracking of expenses | |
| 5. | Notifications | Alerts and suggestions on | InfoSphere MDM Notification |
| | | expenses and earning/saving | Framework |
| | | money techniques | |
| 6. | Database | The Income and Expense data | MySQL, NoSQL, etc. |
| | | are stored in the MySQL | |
| | | database | |
| 7. | Cloud Database | Database service on Cloud | IBM DB2, IBM Cloudant etc. |
| 8. | File Storage | Used to store the Financial data | IBM Block Storage or Other |
| | | of the user | Storage Service or Filesystem |
| 9. | Google OAuth | Allows user to share their | Google Drives |
| | | information and permission from | |
| | | the users to store files in their | |
| | | Google Drives | |
| 10. | Cloud | Application Deployment on | Local, Cloud Foundry, |
| | Deployment | Local System/Cloud | Kubernetes, etc |
| | | Local Server Configuration: | |
| | | Cloud Server Configuration: | |

Table-2: Application characteristics:

| S. No | Characteristics | Description | Technology |
|-------|-----------------|-----------------------------------|---------------------|
| 1. | Open-Source | IBM Open-Source and other | Python-Flask |
| | Frameworks | options available | |
| 2. | Security | List all the security/ access | Container Registry, |
| | Implementations | controls implemented, use of | Kubernetes Cluster |
| | | firewalls etc. | |
| 3. | Scalable | Data-driven vertical architecture | Container Registry, |
| | Architecture | | Kubernetes Cluster |
| 4. | Availability | Maintaining the availability of | Container Registry, |
| | | application by using distributed | Kubernetes Cluster |

| | | servers and high performance IBM frameworks | |
|----|-------------|--|--------------------|
| 5. | Performance | Increasing the UI performance | Kubernetes Cluster |
| | | and customer satisfaction with latest technology and support | |
